
RUDRAYANI FINTECH

Rudrayani CRM — Complete Usage Guide

An end-to-end guide to the Rudrayani Fintech collection-agency CRM: the web portal (management) and the Android mobile app (field and calling staff).

End-to-end guide with a journey for every role.

Document version: 2.0 **Applies to:** the system as of the Phase 9 verification audit · **Audience:** every role, from Agency Admin to Field Agent.

What changed in version 2.0. The **Team Leader** role no longer exists. It was removed from the system entirely and replaced by **Branch Manager** — teams now report directly to their branch's manager, with no intermediary rank. If you have an older copy of this guide that mentions Team Leaders or a mobile "My Team" tab, discard it; neither exists any more. This edition is also reorganised: it now leads with a **journey per role** rather than a tour of screens, so you can read only your own chapter and be productive.

Part I — Understanding the system

1. What this system does

Rudrayani CRM helps a **collection agency** recover overdue loan payments on behalf of **finance companies** (lenders such as Hero FinCorp, Bajaj, TVS Credit, HDB Financial, Tata Capital).

The shape of the business it models:

The agency imports a lender's loan book, assigns each overdue account to a telecaller or field agent, and tracks every call, visit, promise-to-pay, and rupee collected against it — from first contact until the account is either **closed** (fully resolved) or **recalled** (pulled back by the lender).

Two applications

	Who uses it	What it's for
Web portal	Agency Admin, Operations Manager, Branch Manager	Import data, allocate work, approve queues, monitor staff, run reports
Mobile app (Android)	Telecaller, Field Agent — and any manager who also works accounts	Daily worklist, calling, visits, payments, attendance, personal performance

Managers are not locked out of the mobile app, and agents are not locked out of the web portal. Both apps assemble themselves from **what you are permitted to do**, so you see your own pages and nothing else.

One principle worth understanding early

Nothing important happens automatically. Repeat imports never silently change your book — every discrepancy waits for a human decision. Agents cannot edit a saved payment or call remark — they raise a correction request that a manager approves. Reallocations require a logged reason. This is deliberate: the system is designed to be auditable, because collections work is audited.

2. Key terms — glossary

Term	Meaning
Agency	Your collection agency (Rudrayani Fintech). Everything in the system belongs to one agency.
Company	A finance company / lender whose loan book you collect for. A <i>data source</i> , not part of your staff org chart.
Branch	A physical office of your agency (Sangli, Pune, Kolhapur, Latur, Solapur). Each branch has at most one Branch Manager .
Team	A group of staff inside a branch. Teams report directly to the branch's manager.
Designation	Your rank in the system: Agency Admin, Operations Manager, Branch Manager, Telecaller, or Field Agent. This is the single source of truth for what you can do.
Agent type	Separate from designation. Marks a person as doing frontline collections work (telecalling or field work). A Branch Manager with an agent type manages a branch <i>and</i> works their own book.
Capability / Permission	The individual things a designation unlocks — e.g. <code>customers.allocate</code> , <code>imports.review</code> . Stored as configuration, not code.
Customer / Loan Account	One borrower's overdue loan, imported from a company's file. Status: Active , Closed , or Recalled .
Bucket	The lender's own label for how overdue a loan is ("30 DPD", "NPA 1"). Configured per company and mapped to a standard 0–20 "canonical" scale so different lenders can be compared.
DPD	Days Past Due — how many days overdue a loan's EMI is.
POS (Principal Outstanding)	The remaining loan principal still owed. Distinct from Due Amount , which is only the <i>current overdue arrears</i> . Portfolio-size figures use POS.
Product	The loan type ("Personal Loan", "Home Loan"), read automatically from the imported file.
Allocation	Assigning a loan account to a specific Telecaller or Field Agent.
Unallocated Queue	Imported accounts not yet assigned to anyone.
Reallocation	Moving an already-assigned account to a different agent. A reason is mandatory and is logged.
Reallocation Request	An agent asking (from the mobile app) to have a customer moved off them — wrong area, language mismatch, dispute. A manager approves or rejects.
Correction Request	An agent proposing a fix to one of their own already-saved records (payment amount, call remark, PTP detail). There is no direct edit button once saved. A manager approves or rejects. Only a narrow, safe set of fields is ever correctable — never the customer, the collecting agent, or any timestamp.
Disposition / Disposition Code	The recorded outcome of a call or visit — "PTP" (Promise to Pay), "RNR" (Ringing, No Response), "RTP" (Refuse to Pay). Each code declares which extra details it needs.
Trail / Trail History	The full ordered history of every call and visit logged against a customer.
PTP (Promise to Pay)	A commitment to pay a specific amount by a specific date. Status: pending , kept , or broken .

Term	Meaning
Next Action Date	The date a customer next needs attention. Drives the order of your worklist so the most urgent work rises to the top.
Reminder	A personal follow-up alert an agent sets for themselves, with or without a customer attached. Fires a phone notification at the chosen time.
Field Visit	A record of an in-person visit — requires a photo, captures GPS automatically.
Payment	Money collected, with amount, mode, date, and usually a photo proof.
Receipt Number	A sequential receipt identifier generated per branch per financial year when a payment is recorded.
Deposit / Deposited	Once collected cash is physically banked, an admin or ops user marks the payment "Deposited". Until then it shows as "Pending".
Closed	The account was fully resolved (paid off) and marked closed from the mobile Payment screen.
Recalled	The <i>lender</i> pulled the account back, told to the agency via a monthly import file. Not the same as Closed — it does not mean the debt was resolved.
Normalized (pending lender confirmation)	A blue badge shown when a payment has brought an account back to current <i>before</i> the lender's own file confirms it. The lender's label stays authoritative everywhere else.
Bucket Movement	A detected change in a customer's delinquency bucket — either "Payment (in-month)" (detected immediately) or "Allocation (confirmed)" (confirmed by the lender's next file).
Import Template	A saved mapping (Excel column → system field) for a company's file layout, so future uploads auto-map.
Import Review Queue	Where a manager decides what to do with discrepancies in a repeat monthly import: additions , removals (→ recalled), and reactivations .
Custom Field / Detail Field	Any import column that didn't map to a standard field is kept as a custom field so no data is lost. Some can be flagged to show on the Customer view.
Field Definition	An admin-configurable catalog entry describing an import column — what the Import wizard's mapping step offers.
Target	A monthly goal (₹ or count) per agent / team / branch / agency, for five metrics: Collection, Resolution, Roll Back, Normalization, Recovery.
Punch In / Punch Out	Starting and ending your work shift in the mobile app. Punching in starts location tracking. You cannot use the mobile app at all until you punch in.
Day Plan	A web page showing, for any day, every agent's attendance, PTPs due, reminders due, and activity.
Setup Checklist	A six-step guide shown on a new agency's dashboard: add a company, add branches, add employees, import a file, allocate, set targets.
Sync queue / Dead letter	Work you did offline waiting to reach the server. An item that repeatedly fails becomes a "dead letter" — still visible, never silently deleted, but no longer retried automatically.
Org Chart	A reporting-line tree. Every employee can optionally have a Manager (any other employee) purely for "who reports to whom" — separate from Branch and Team structure.

3. The five roles at a glance

Your **designation** determines everything. There are exactly five.

What each role can do

A ✓ means the role holds that permission. This table is the authoritative answer to "why can't I see that page?"

What you want to do	Permission	Agency Admin	Ops Manager	Branch Manager	Telecaller	Field Agent
View employees	employees.view	✓	✓	✓	—	—
Add employees	employees.create	✓	✓	✓	—	—
Edit employees	employees.update	✓	✓	—	—	—
Deactivate employees	employees.deactivate	✓	✓	—	—	—
Add another Operations Manager	ops_managers.create	✓	—	—	—	—
Access billing	billing.view	✓	—	—	—	—
Create / rename branches	branches.manage	✓	✓	✓	—	—
Create / rename teams	teams.manage	✓	✓	✓	—	—
Manage companies & buckets	companies.manage	✓	✓	—	—	—
Run imports	imports.manage	✓	✓	—	—	—
Decide import discrepancies	imports.review	✓	✓	—	—	—
Maintain disposition codes	dispositions.manage	✓	✓	—	—	—
View customers	customers.view	✓	✓	✓	✓	✓
Allocate / reallocate customers	customers.allocate	✓	✓	✓	—	—
View team & agency reports	reports.view	✓	✓	✓	—	—
View own performance	reports.view_self	✓	✓	✓	✓	✓
Set targets	targets.manage	✓	✓	—	—	—
Mark payments deposited	payments.deposit	✓	✓	—	—	—
Log calls	calls.log	✓	✓	✓	✓	✓
Record payments	payments.record	✓	✓	✓	✓	✓
Punch in / out	attendance.punch	✓	✓	✓	✓	✓
Set reminders	reminders.manage	✓	✓	✓	✓	✓

What you want to do	Permission	Agency Admin	Ops Manager	Branch Manager	Telecaller	Field Agent
See tracking / attendance	<code>tracking.view</code>	✓	✓	✓	✓	✓

Two rows in that table are easy to misread:

- `tracking.view` is held by **everyone**, but it does not mean an agent can watch their colleagues. Permission decides *whether the page opens*; the visibility tier (next section) decides *what appears on it*. An agent opening a tracking view sees only their own attendance and route.
- `employees.create` without `employees.update` is the Branch Manager's position exactly: they can bring new staff into their branch, but cannot edit or deactivate anyone afterwards. That is an intentional escalation boundary — changing someone's designation or switching off their account is an Ops-and-above action.

4. Who can see what — the three visibility tiers

Permissions decide which pages open. **Scope** decides how much data appears on them. There are exactly three tiers.

A worked example

Priya manages the **Sangli** branch. Rahul is an Operations Manager. Sunil is a telecaller in Sangli. Meena is a telecaller in Pune.

- **Rahul** opens the Customers page and sees every account in the agency — Sangli, Pune, everywhere.
- **Priya** opens the same page and sees only Sangli accounts. If she filters for Pune, she gets zero rows. This is correct, not broken.
- **Sunil** opens his worklist and sees only the accounts allocated to him — not every Sangli account, just his own.
- If Sunil is *also* assigned to Pune as a second branch, then the **Pune** branch manager can see him too, even though his home branch is Sangli.
- **Meena's** accounts never appear anywhere in Priya's portal.

Two behaviours worth knowing

A Branch Manager with no branch assigned sees nothing at all. If you have been given the Branch Manager designation but nobody has yet set you as the manager of an actual branch, every list will be empty. The system

deliberately fails to "nothing" rather than "everything". Ask an Ops Manager to assign you to a branch — on the mobile Branch Dashboard you will see the message *"Ask an admin to assign this branch"*.

Branch scoping tolerates messy lender data. Not every lender's file includes a branch column. When it doesn't, the system falls back to matching the branch *name* recorded against the customer, so a Branch Manager still sees their book instead of an empty screen.

Part II — Your journey, by role

Each of the next five chapters follows the same shape: who you are, your first day, a typical day, everything you can do, and what you can't do and why. Read your own chapter; skim the others only if you manage those people.

5. Agency Admin

Where you work: primarily the web portal. The mobile app is available to you and shows the branch-manager-style dashboard. **How many of you there are:** exactly one per agency.

5.1 Who you are

You are the owner of the agency's account. You can do everything anyone else can do, plus two things nobody else can: **add Operations Managers** and **access billing**. Your own account cannot be edited or deactivated from the Employees page — it is managed separately, on purpose, so nobody can lock the agency out of its own system.

5.2 Day one — standing the agency up

There is no self-registration. Your account is created during the agency's technical setup. When you log in for the first time, the dashboard will be full of zeros — that is expected, and a **Setup Checklist** appears at the top with six steps. Work down it in order; each step links straight to the page you need.

Each step's tick comes from a real check against your data, not a box you can tick yourself — so the checklist cannot get out of sync, and won't keep nagging about something you've already done. You can dismiss it once

you're set up.

The order matters. Branches must exist before you can place employees in them. A company must exist before you can import its file. Customers must be imported before there is anything to allocate.

5.3 A typical day

Most days you are not doing setup — you're checking that the operation is healthy.

1. **Open the Dashboard.** Check Collection MTD against target, and the "days left in month" indicator. If there are pending approvals anywhere, an alert strip at the top tells you before you go looking.
2. **Clear the queues.** Import Review, Reallocation Requests, Correction Requests. Nothing in these moves until a human decides, so they are the first place work gets stuck.
3. **Check the Management Dashboard** for the leadership view — total portfolio, collection %, top and bottom performers.
4. **Check Deposits.** Cash collected in the field is only reconciled once somebody marks it deposited. Left undone, your reporting understates what actually reached the bank.
5. **Spot-check Tracking or Day Plan** if a branch's numbers look wrong.

5.4 Everything you can do

Area	Pages	Notes
Organisation	Companies, Branches, Teams, Employees, Org Chart	Only you can grant the Operations Manager designation
Master data	Buckets, Field Config, Dispositions	Agency-wide configuration
Data intake	Import, Import Review	The 4-step import wizard and the discrepancy queue
Work management	Customers, Allocation, Reallocation Requests, Correction Requests	
Reporting	Dashboard, Management Dashboard, Reports, Targets	Export to Excel from all of them
Oversight	Tracking, Day Plan, Attendance, Deposits	
Your own book	My Worklist	Only if you also carry an agent type

5.5 What you cannot do

Almost nothing — but two limits are worth knowing:

- **You cannot edit a bucket label.** Bucket labels arrive from the lender's file and are authoritative. You configure how buckets *behave* (order, category, canonical mapping) on the Buckets page, but you never type a label.
- **You cannot make a repeat import apply itself.** Every discrepancy goes to Import Review, every time, by design.

6. Operations Manager

Where you work: primarily the web portal; the mobile app is available and shows the branch-manager-style dashboard.

6.1 Who you are

You run the agency day to day. You can do everything the Agency Admin can, **except** adding another Operations Manager and accessing billing. In practice this means you are the person who actually operates the system: you import the books, decide the discrepancies, set the targets, and keep the branches honest.

6.2 Day one

Your account is created for you by the Agency Admin on the Employees page. Log in with your phone number and the initial password you were given. You land on the Dashboard with full agency-wide visibility from the first minute.

If the agency is brand new, you will see the same Setup Checklist described in §5.2 — and in most agencies it is the Ops Manager, not the Admin, who actually works through it.

6.3 A typical day

6.4 Your core responsibilities in detail

Bringing in a lender's book. The Import wizard is four steps: Select & Upload → Map Columns → Preview & Validate → Done. Save your column mapping as a **Template** the first time; every future file from that company then auto-maps. Any column you don't map is kept as a custom field — no data is ever lost. Maximum file size is 15 MB.

Deciding discrepancies. A repeat import for a month you've already loaded never applies changes on its own. It produces three kinds of item in Import Review, each of which you approve or reject:

Type	Tag	What approving does
Addition	blue	Inserts the new customer
Removal	red	Marks the customer Recalled and clears their agent assignment
Reactivation	orange	Restores a previously recalled customer to Active

Expand any row before deciding — you'll see the customer's last remark, pending PTP, and amount paid this month.

Allocating work. The Allocation page has two tabs: the **Unallocated Queue** (filter, multi-select, pick an agent, Assign) and **Allocated** (multi-select, Reallocate with a mandatory reason, or view the full reassignment History for any row).

Setting targets. Targets can be set per agent, per team, per branch, or for the whole agency, across five metrics. If nobody has set a Collection target at any level, the dashboard falls back to the book's own EMI schedule as a computed default — so there is always a sensible benchmark. That fallback applies only to Collection; the other four show no target until you set one.

Reconciling cash. On the Deposits page, filter to Pending, multi-select, and Mark deposited. Already-deposited rows cannot be unchecked. This feeds the dashboard's Deposited Metrics directly.

6.5 What you cannot do, and why

- **Add another Operations Manager.** That is the Agency Admin's call alone — it is the one action that widens the circle of people with near-total access.
- **Access billing.** Same reasoning.
- **Edit the Agency Admin's account** from the Employees page.

7. Branch Manager

Where you work: both. The web portal for allocation, approvals and reports; the mobile app for a live branch view and approvals on the move. **How many of you there are:** at most one per branch.

7.1 Who you are

You are responsible for one branch — every team in it, every agent, every customer. There is no rank between you and your agents; teams report directly to you.

You may *also* carry an **agent type**, meaning you work your own book of accounts alongside managing the branch. If so, you get a personal worklist in addition to everything below — see §10.

7.2 Day one

An Ops Manager creates your account **and** assigns you as the manager of an actual branch. Those are two separate things, and both must happen.

If your screens are empty, this is why. Until somebody sets you as the manager of a branch, you will see zero customers, zero employees, zero everything — the mobile Branch Dashboard will say *"Ask an admin to assign this branch"*. The system defaults to showing nothing rather than risking showing you another branch's data. Ask an Ops Manager to complete the assignment.

7.3 A typical day

7.4 Everything you can do

On the web portal

Page	What you do there
Dashboard	Full performance dashboard, scoped to your branch
Management Dashboard	KPI view of your branch
Reports	Breakdown by product, bucket, team, agent — exportable
Allocation	Assign unallocated accounts; reallocate with a reason
Reallocation Requests	Approve or reject requests from your agents
Correction Requests	Approve or reject record corrections from your agents
Customers	Browse your branch's book; open the full Customer 360 view
Employees	View your branch's staff; add new ones
Branches / Teams	Create and rename teams within your branch
Org Chart	Reporting-line tree
Tracking	Live map and route replay for your agents
Day Plan / Attendance	Daily summary and the full attendance log
My Worklist	Your own accounts, if you carry an agent type

On the mobile app — your bottom tabs are **My Worklist**, **Branch Dashboard**, **My Performance**, and **Account**. The Branch Dashboard gives you:

- **Collections Today** split by Cash and Online
- **Attendance / GPS (Branch-wide)** — who is punched in, who is on duty
- **Teams in this Branch** — activity per team this month
- **Reallocation approvals** — Approve (optionally naming a new agent, or returning the customer to the unallocated pool) or Reject, right from the phone

Your **Account** tab also gains a Management section: All Customers, Employees, Teams, Branches, Companies, and Catalog (products, buckets, dispositions) — all read-only lookups, all branch-scoped.

7.5 What you cannot do, and why

You sit deliberately below the Operations Manager on three things:

- **You cannot edit or deactivate employees.** You can *add* staff to your branch, but changing someone's designation, or switching their account off, is an Ops-and-above action. Changing a designation changes what someone can see across the whole agency, so it sits above branch level.
- **You cannot manage agency-wide master data** — companies, buckets, field config, disposition codes, or imports. These are shared by every branch, so they are not a branch-level concern.
- **You cannot set targets, review imports, or mark deposits.** These are agency-wide operational controls.

If you need any of the above, ask an Operations Manager.

8. Telecaller

Where you work: the mobile app, all day. The web portal is available and shows you a personal performance view and your own worklist.

8.1 Who you are

You work a book of overdue accounts by phone. You see only your own accounts and only your own numbers.

8.2 Day one

1. Install the app (your admin gives you the APK, or adds you to the Play Store internal testing track).
2. Enter your **10-digit phone number** and the password your manager gave you, then **Sign In**.
3. **You will land on a "Punch In Required" screen.** This is not optional and not a bug — see below.

The punch-in gate

You cannot reach any part of the mobile app until you punch in. Not the worklist, not a customer, not your performance. Punching in starts your shift and starts location tracking, and the app treats that as the precondition for doing any work at all.

Punching in needs a live connection *if the app has never seen your punch state before*. If you're offline, the app will queue the punch-in and open your shift locally, then reconcile with the server when you're back in range.

While on duty you will see a **persistent notification** the entire time. That is required for location tracking to work reliably on Android — it is expected, and dismissing it is not possible while your shift is open.

The gear icon on the login screen is a technical "server address" setting. Leave it alone unless your admin explicitly tells you otherwise.

8.3 A typical day

8.4 The screens you live in

My Worklist — your home base.

- A **duty banner** at the top showing you're on shift.
- A **sync banner**, which appears only when something you did offline is still waiting to reach the server. Tap **Sync now** to retry immediately.
- A **Due Today** strip: reminders due today (tap the checkmark to mark done) and PTPs due or overdue. Collapsible.
- **Search** by name, loan number, or mobile.
- **Customer cards** showing name, loan number, company, due amount, last call outcome, active PTP, and a "Normalized, pending lender confirmation" note where relevant.

Your worklist is ordered by **next action date**, so the most urgent work is at the top. You do not need to hunt for it.

Customer Detail — everything about one account, with these actions:

Action	What it does
Call	Opens your phone's dialer with the number filled in
Log Call	Records the outcome (see below)
Record Payment	Amount, mode, date, optional photo, and a "Mark customer as Closed" toggle
View PTPs	This customer's promises — and where you create, reschedule, or resolve them
Field Visit	Records an in-person visit (photo required)
Navigate	Opens your maps app to the customer's address, if one is on file
Set Reminder	A personal follow-up alert
Send Reminder	Sends the customer a reminder via SMS or WhatsApp
: → Request Reallocation	Asks your manager to move this customer off you, with a required reason

Below the buttons: Loan Details, Last Disposition, Active PTP, Additional Fields (extra data from the original import), Documents, and a **History** timeline merging every call, payment, visit, PTP, and document into one feed.

Log Call — pick a **disposition code**, and the screen reveals exactly the fields that code requires (Amount, Date, Time, Mode, Reason, Name/Relation) and nothing more. A live preview shows the exact remark that will be saved. Works offline.

PTPs — you can **Create PTP**, **Reschedule / Update** an existing one, and mark one **Kept** or **Broken**. After saving, you can **Confirm via SMS** or **Confirm on WhatsApp** to send the customer their commitment in writing.

My Performance — your own scorecard: collection vs target with a progress bar and "amount needed per day to hit target", calls made today with a connected rate, PTPs created / kept / broken this month, and per-metric breakdowns.

Your Dashboard tab shows Daily Target vs Achievement, Total Calls, RPC/Connected rate, PTP Created / Kept / Broken, pending PTP value, and escalation cases.

8.5 Working offline

Almost everything you do works without a signal:

Action	Works offline?
Log a call	✓ Queued and synced
Record a payment (incl. photo)	✓ Queued and synced
Record a field visit	✓ Queued and synced
Punch in	✓ Queued (opens your shift locally)
Upload a photo document	✓ Queued
Create a reminder	✓ Fires on time regardless
Location pings during your shift	✓ Batched and sent when you're back in range
Punch out	X Needs a connection
Mark a reminder done	X Needs a connection
Upload a PDF document	X Needs a connection

Queued work is stored on your phone, survives closing the app, and is never duplicated on the server even if a sync is interrupted halfway. If an item fails repeatedly it becomes a **dead letter** — it stops retrying automatically but stays visible so you (or your manager) can deal with it. Nothing is ever silently discarded.

8.6 What you cannot do, and why

- **You cannot edit a saved payment, call log, or PTP detail.** Raise a **Correction Request** instead — your manager approves it. This keeps the trail honest.
- **You cannot reallocate a customer yourself.** Raise a **Reallocation Request**; a manager decides.
- **You cannot change a bucket.** Buckets come from the lender's file and are authoritative. If one looks wrong, note it in a call remark and tell your manager.
- **You cannot see other agents' customers or numbers.**

9. Field Agent

Where you work: the mobile app, in the field.

Everything in the Telecaller chapter (§8) applies to you — the punch-in gate, the worklist, logging calls, recording payments, PTPs, reminders, offline behaviour, correction and reallocation requests. This chapter covers only what is *different*.

9.1 What's different

Field visits are your primary activity. From Customer Detail → **Field Visit**: a **photo is required** (camera or gallery), a remark is optional, and your GPS location is captured automatically in the background when you save — there is no separate location button. Works offline.

Navigation. The **Navigate** button opens your maps app pointed at the customer's address, when one is on file.

Your dashboard is visit-shaped, not call-shaped. Where a telecaller's dashboard leads with call counts, yours shows:

- **Daily Target vs Achievement** and Collected MTD
- **Attendance / GPS** — your on-duty status, punch-in time, and GPS ping count
- **Visits Planned**, and visits recorded With Photo
- **Receipts Generated** — receipts and documents captured
- **PTP Created / Kept / Broken** this month
- **Customer Location**

Location tracking matters more for you. While you're punched in, your location is sent automatically every couple of minutes. If signal drops, pings are saved on your phone and sent in a batch once you're back in range — nothing is lost. Your manager can see your live position on the Tracking map and replay your day's route afterwards.

9.2 A typical field day

9.3 A note on battery

Continuous GPS is demanding. Two honest points:

- Keep the persistent notification — killing it stops tracking, and your route and attendance will be incomplete.
- **Punch out at the end of your shift.** There is currently no automatic punch-out and no reminder to do it. Leaving a shift open overnight keeps GPS running and will drain your battery badly.

10. People who hold more than one role

The apps do not force you into a single role. They assemble what you see from **everything you're allowed to do**.

The common case is a **Branch Manager who also works accounts** — they have the Branch Manager designation *and* an agent type (telecaller or field agent).

	What they get
Web portal	The full manager nav (Allocation, approvals, Reports, Tracking...) plus a My Worklist page with their own properly-scoped book
Mobile app	Tabs: My Worklist · Branch Dashboard · My Performance · Account

A few details that follow from this:

- **My Worklist appears for anyone who logs calls**, not just individual contributors. A manager with an agent type gets their own book rather than being stuck on the org-wide Customers list.
- **The Customers page is hidden from plain telecallers and field agents** — for them it is a strictly less useful version of My Worklist (no last-call or PTP context). Managers still see it, because for them it is the agency- or branch-wide view.
- **A single "My work only" switch** in the portal header controls every my-work-versus-team view at once, so you don't have to reconcile separate toggles on different pages.
- On mobile, exactly **one** management-tier dashboard tab appears. If you somehow hold several capabilities, the widest one wins: Branch Manager, then Telecaller, then Field Agent. Agency Admins and Operations Managers see the Branch Dashboard tab, scoped agency-wide.

Part III — Work that crosses roles

11. Cross-role workflows

These are the flows where work passes between people. Each diagram shows who acts at each step.

11.1 Bringing in a new loan book

11.2 The monthly refresh and the review queue

This is the flow people most often expect to be automatic. It isn't, deliberately.

11.3 From allocation to banked cash

The full money path, and every role that touches it.

11.4 The PTP lifecycle

A PTP that is never matched by a payment does not sit at "pending" forever — a job runs every night and marks overdue promises **broken**, so your kept/broken ratio stays honest without anyone having to tidy up manually.

11.5 Reallocation request

11.6 Correction request

Agents cannot edit their own saved records. This is how a genuine mistake gets fixed.

Only a narrow, safe list of fields can ever be corrected this way. **Never** correctable: the customer the record belongs to, the collecting agent, or any timestamp. Those are the fields an audit depends on.

11.7 A day with no signal

Part IV — Reference

12. Web portal — page by page

The left-hand menu shows only pages you have permission to open. Each entry below names the permission that unlocks it.

Every page has a **sun/moon icon** in the header for light/dark mode. Your choice is remembered on that device and follows your operating system's setting the first time. On a narrow screen, use the header button to open and close the navigation menu.

Dashboard (*everyone*)

Your home page. What you see depends on whether you hold `reports.view` :

With `reports.view` (Admin, Ops Manager, Branch Manager) — a full Performance Dashboard:

- Product tabs, a month picker, filters (Company / Branch / Team / Agent / Bucket / Status, according to your scope), and an Amount/Count toggle
- Collection MTD vs target, with a "days left in month" indicator
- A circular gauge and metric cards for **Resolution**, **Roll Back**, **Normalization**, and **Recovery**
- Deposited Metrics (collected vs deposited vs pending)
- Trail Uploaded Metrics — how much of the book has actually been worked
- **Recalled This Month** tile, clickable for the list and reasons
- **Bucket Movements This Month** — payment-detected vs lender-confirmed
- **Bucket Mismatches (DPD Cross-Check)** — a "worth a second look" list where the EMI due date suggests a different bucket than the lender's label. Informational only; it never overrides the lender's data
- **Exception Payments** and **PTP kept/broken** counts
- A **Breakdown** table sliceable by Company / Product / Bucket / Branch / Team / Agent
- **Trail Analytics** — call outcomes over a date range, PTP conversion %
- A **Setup Checklist** on a new agency, and a **Pending Approvals** alert when any queue needs you
- An **Export** button producing an Excel workbook
- A **Customize** control to choose which widgets appear

Without `reports.view` (Telecaller, Field Agent) — a simpler "My Performance" view: your own numbers, no filters.

For exactly how every number is calculated, see `docs/metrics-formulas.md` .

Management Dashboard (`reports.view`)

A leadership-oriented KPI view of the same data: Total Portfolio (POS), Collected Today vs MTD, Collection %, pending PTP value, broken PTP count, Outstanding Balance, Active Agents/Cases, EMI vs Settlement collections, Field vs Telecalling collections, a daily Recovery Trend chart, the same Breakdown table, and Top 10 / Bottom 10

agent leaderboards. A "Coming Soon" strip lists KPIs not yet built (Revenue & Agency Commission, Compliance Alerts, Legal Cases Status, Incentive Calculator).

Reports (`reports.view`)

A dedicated home for the reporting engine: a free dimension selector, an exportable breakdown table, trail analytics, exception payments, and **URL-synced filters** — so a report can be bookmarked or pasted to a colleague and they see exactly what you see. Export to CSV, or print.

Not included here by design: saved report definitions (a separate feature) and Deposits (which has its own page).

My Worklist (`calls.log`)

Your own book of accounts in the browser — the web counterpart of the mobile worklist, for anyone who personally works accounts, managers included. Shows reminders and PTPs due, bucket severity colouring, and lets you log a call, record a payment, or raise a correction without leaving the page.

My Requests (*individual contributors*)

"What happened to the reallocation requests I submitted?" — filter by Pending / Approved / Rejected. Self-scoped to your own submissions.

Organization (*submenu — appears if you hold any of its children*)

- **Companies** (`companies.manage`) — create or rename the lenders whose books you collect. Data sources, not org structure.
- **Branches** (`branches.manage`) — create or rename your offices. No delete.
- **Teams** (`teams.manage`) — create or rename teams; each belongs to one branch.
- **Employees** (`employees.view`) — your staff directory. Search by name or phone; add an employee (name, phone, email, initial password, branch, team, designation, agent type); edit, deactivate, or reset a password *if you hold* `employees.update` . Only the Agency Admin can grant the Operations Manager designation. The Agency Admin's own account cannot be edited here.
- **Org Chart** (`employees.view`) — a reporting-line tree. Each employee can optionally have a **Manager** (any other employee), purely for "who reports to whom" visibility — separate from Branch and Team structure. Anyone whose manager isn't visible in your scope appears as a root with a "reports to X" note.

Buckets (`companies.manage`)

Pick a company, then configure its delinquency buckets: reorder them (least to most overdue), mark one as "Current" (needed for the Normalization metric), categorise each as Normal or NPA (drives Recovery), and map each to a canonical 0–20 DPD number so different lenders compare on one scale. **Bucket labels themselves arrive from imports** — you configure behaviour, you never type a label.

Field Config (`companies.manage`)

Controls what columns the Import wizard can map to. Lists every **Field Definition**: core fields every company must have (Loan Number, Customer Name, Due Amount...) which can be disabled per company but never deleted, plus custom fields your agency has added, which become mappable the moment they're enabled for a company.

Import (`imports.manage`)

A four-step wizard:

1. **Select & Upload** — pick the Company, choose **New customers** or **Monthly allocation** (and the month), upload the `.xlsx` (max 15 MB).
2. **Map Columns** — match each Excel column to a system field (Loan Number, Customer Name, Mobile, Product, Bucket, Due Amount, POS, EMI, EMI Due Date, Agent Phone). Save as a **Template** for reuse. Unmapped columns become custom fields automatically.
3. **Preview & Validate** — counts (valid rows, errors, duplicates, new vs existing), a row-level error list, and a warning if reactivations were detected.
4. **Done** — inserted / updated / skipped counts, and a link to Import Review if anything needs a decision.

There is also an **Import History** tab per company, with rollback for a run.

Import Review (`imports.review`)

The discrepancy queue. Filter by Company / Status / Type, select rows singly or in bulk, then Approve or Reject. See §11.2 for what each type does. Expand a row to see the customer's last remark, pending PTP, and amount paid this month before deciding.

Customers (`customers.view` — *hidden from plain agents*)

Browse and search the whole book (filter by Company / Product / Bucket / Status, or search by name, loan number, or mobile), with **URL-synced filters** and CSV export. Click any row for the **Customer 360** side panel:

- Identity, due amount, POS, EMI, DPD, due date
- Extra "detail fields" captured at import
- **Trail History** — every call, oldest to newest
- **Promises to Pay** — with status
- **Payments** — amount, mode, date, receipt number, deposited status
- **Bucket Movements** — the history of delinquency changes
- **Allocation History** — every reassignment, with reason
- **Documents** — upload and download supporting files (photo or PDF, max 10 MB)
- **Month Snapshots** — the customer's state at each monthly import

Allocation (`customers.allocate`)

- **Unallocated Queue** — filter, multi-select, pick an agent, **Assign**.
- **Allocated** — see who has what; multi-select and **Reallocate...** (reason mandatory, logged); **History** on any row for the full timeline.

Reallocation Requests (`customers.allocate`)

Approve or reject agents' requests to be taken off a customer. Approving optionally names a new agent; leaving it blank returns the customer to the unallocated pool. Rejecting leaves things as they are.

Correction Requests (*customers.allocate*)

Approve or reject agents' proposed fixes to their own saved records. See §11.6.

Dispositions (*dispositions.manage*)

The master list of call-outcome codes. Add or edit a code: Action Code, Result Code, Category, Description, a **Remark template** (which auto-composes the saved remark), and checkboxes for which fields it requires (Amount, Date, Time, Mode, Reason, Name/Relation). Codes are never deleted — only **Retired**, and they can be restored.

Tracking (*tracking.view*)

- **Live Map** — every on-duty agent in your scope as a coloured dot: green Moving, red Stationary, orange No Signal, grey Awaiting First Ping. Auto-refreshes every 30 seconds, with an alert banner if anyone is flagged.
- **Route Replay** — pick an employee and a date (up to 60 days back — the location retention window) to see the full day's path and total distance.

A bell icon in the header polls the same live data from anywhere in the app and pops a toast if someone goes stationary or loses signal.

Day Plan (*tracking.view*)

For any date, one row per agent: attendance status, PTPs due (count and ₹), reminders due, calls made, payments collected. Expand a row for the actual customer list behind those counts.

Attendance (*tracking.view*)

The full, filterable, exportable attendance log — every punch-in/punch-out with duration, filterable by date range, branch, team, agent, or "on-duty only". Where Day Plan is the at-a-glance summary, this is the audit record behind it.

Targets (*targets.manage*)

Set monthly targets. Choose the scope (Per agent / Per team / Per branch / Whole agency), edit numbers directly in the table across the five metrics, or bulk-import from Excel. **Save changes** enables only once you've edited something; clearing a cell removes that target.

If no manual Collection target exists at any level, the dashboard falls back to the book's own EMI schedule as a computed default. This applies only to Collection.

Deposits (*payments.deposit*)

Reconcile field-collected cash. Filter by month / status / company, multi-select **Pending** payments, **Mark deposited**. Already-deposited rows cannot be unchecked here.

13. Mobile app — screen by screen

Login

Phone (10 digits) + password, then **Sign In**. Error messages distinguish wrong credentials, a locked account, and a server-connection problem. The gear icon is a technical server-address setting — leave it alone.

Punch In Required — the gate

Shown immediately after login if your shift isn't open. **No other screen is reachable until you punch in.** Punching in requests location and notification permissions, takes a GPS fix, opens your shift, and starts the background tracking service with its persistent notification.

Bottom tabs

Everyone gets **My Worklist**, **My Performance**, and **Account**. Between the first two, exactly one role-specific dashboard appears:

Your role	Middle tab
Agency Admin / Operations Manager	Branch Dashboard (agency-wide)
Branch Manager	Branch Dashboard (your branch)
Telecaller	Dashboard (call-shaped)
Field Agent	Dashboard (visit-shaped)

My Worklist

Duty banner, sync banner (only when something is queued), a collapsible **Due Today** strip (reminders due — tap the checkmark to mark done; PTPs due or overdue), search by name / loan number / mobile, and customer cards. Ordered by next action date.

Customer Detail

See §8.4 for the full action list. Cards below the actions: Loan Details, Last Disposition, Active PTP, Additional Fields, Documents, and a merged **History** timeline.

Log Call

Pick a disposition code; only the fields that code needs appear. Live preview of the remark that will be saved. Works offline.

Record Payment

Amount (required), Mode, Date (defaults to today), optional photo (camera or gallery), and a **Mark customer as Closed** toggle if this settles the account. Generates a receipt number. Works offline.

PTPs

This customer's promises, with **Create PTP**, **Reschedule / Update PTP**, **Mark Kept**, and **Mark Broken**. Overdue pending promises are flagged in red. After saving you can **Confirm via SMS** or **Confirm on WhatsApp**. Modes

available: Cash, NEFT, RTGS, UPI, Cheque, DD.

Field Visit

A **photo is required**; a remark is optional; GPS is captured automatically on save. Works offline.

Set Reminder / Send Reminder

Set Reminder schedules a notification on your own phone for a chosen date and time — it fires even if the app is closed and even with no network. **Send Reminder** messages the *customer* via SMS or WhatsApp.

Documents

Upload a photo (camera or gallery) or a PDF (file picker) against a customer. Photos queue offline; **PDFs need an active connection**.

Correction Request

Raised from a saved record you need fixed. Provide the proposed value and a reason — the app will ask you to explain properly if the reason is too short.

My Performance

Your own read-only scorecard for the month, shaped to your role — see §8.4 and §9.1.

Account

Your profile, the **Punch Out** control with your on-duty status, and — for Agency Admins, Operations Managers, and Branch Managers — a **Management** section with read-only lookups: All Customers, Employees, Teams, Branches, Companies, and Catalog (products, buckets, dispositions).

14. Best practices for agents

These are working guidelines, not features — how to use the tools well.

Call cadence by bucket. As a rough guide: Current accounts — a monthly touch about the upcoming EMI. Early buckets (30–60 DPD) — weekly. Later buckets (60–90 DPD and NPA) — weekly or more. If a customer is responsive, call more often while momentum is with you. If a customer stops responding after 3–5 attempts, raise it with your manager rather than calling indefinitely.

When a customer says they can't pay. Don't argue — look for a smaller commitment: "Can you manage a partial amount instead of the full EMI?" or "Can you commit to a date when you'll have funds?" Log whatever is agreed, and escalate genuine hardship to your manager.

When a customer says they already paid. Don't argue on the call — check the **Payments** history on Customer Detail first. If it's there, acknowledge it and move on. If it isn't, say you'll verify and call back — don't pretend to check something you haven't — then flag it to your manager with the amount and date claimed. It may be in transit, or a real discrepancy worth investigating.

Make promises realistic. Only money actually received counts toward your Collection number — a pending PTP doesn't. A kept promise for a smaller, realistic amount is worth more to your numbers, and to the account's history, than an ambitious one that gets logged as broken.

Confirm promises in writing. After creating a PTP, use **Confirm via SMS** or **Confirm on WhatsApp**. A customer who has the commitment in writing keeps it more often.

Keep the trail honest. If a promise changes, reschedule the PTP rather than letting it lapse. If you make a genuine mistake in a saved record, raise a correction request — don't work around it with a misleading second entry.

If a customer keeps breaking promises. Three or more broken PTPs from the same customer is worth raising with your manager. They may reallocate the account or escalate it, rather than you continuing to take promises that don't hold.

A "Recalled" customer means stop working it. The lender has pulled the account back. It will leave your active worklist. If it returns in a future import as a reactivation, it will be reallocated and you'll see it again if it comes to you.

Never try to "fix" a bucket yourself. A bucket always comes from the lender's file, and there is deliberately no way to edit it. If one looks wrong, note your concern in a call remark and tell your manager, who can escalate to Operations and on to the lender.

Tracking your own pace. Your My Performance screen shows your target and your collection so far. $\text{remaining target} \div \text{days left in the month}$ tells you roughly what you need per day — the same "required per day" figure the app already calculates for you.

Punch out at the end of your shift. There is no automatic punch-out. Leaving a shift open keeps GPS running overnight and drains your battery.

15. Troubleshooting & FAQ

I can't get past the "Punch In Required" screen. That screen is the app's front door — you must punch in to use anything. If punch-in itself is failing, check that you granted location and notification permissions, and that GPS is switched on. If you're offline and the app has never seen your punch state, it will queue the punch-in and let you through.

"Cannot reach server" on mobile login. Check your internet connection first. If it persists on a working connection, the app may be pointed at the wrong server address — ask your admin (the gear icon on the login screen).

I logged in before but got signed out after restarting the app. This shouldn't normally happen — the app keeps you signed in across restarts even without a network, and only signs you out on a real authentication failure (your password was reset, or your account was deactivated). If it keeps happening, contact your admin.

My account is locked. Too many wrong password attempts in a row locks an account temporarily. Contact your manager.

I forgot my password.

Password reset by SMS does not currently work. The system has an OTP reset flow built, but no SMS provider has been connected yet, so the code never reaches your phone. Until that is set up, ask an Operations Manager or the Agency Admin to set a new password for you directly from the Employees page.

A photo or document I uploaded says "will sync automatically" — is it saved? Yes. It is stored on your phone and will upload as soon as you have a connection, or when you tap **Sync now**. You can close the app.

A PDF upload failed while I was offline. Unlike photos, PDFs need an active connection — they are not queued. Try again once you're back online.

Something has been stuck in my sync queue for days. After repeated failures an item becomes a **dead letter**: it stops retrying on its own but stays visible and is never deleted. Try **Sync now** on a good connection. If it still won't go, show it to your manager — it may be a record the server is legitimately rejecting (for example, a payment against a customer who has since been closed).

Why can't I see the Customers page? If you're a telecaller or field agent, it is hidden on purpose — **My Worklist** shows the same accounts with more useful context (last call, active PTP). Nothing is being kept from you.

I'm a Branch Manager and every screen is empty. You have the designation, but nobody has assigned you as the manager of an actual branch yet. The system shows nothing rather than risk showing another branch's data. Ask an Operations Manager to complete the assignment.

I'm a Branch Manager and I can't edit an employee. Correct — you can add staff to your branch but not edit or deactivate them. That is an Operations Manager action. See §7.5.

Why does a customer say "Normalized this month, pending lender confirmation"? A payment has brought the account back to current, but the lender hasn't confirmed it in their own file yet. It doesn't change what you should do — keep working the account normally.

What's the difference between Closed and Recalled? **Closed** means the account was fully resolved and marked closed from the app. **Recalled** means the *lender* pulled it back — not something an agent does, and it does not mean the debt was resolved.

I can't edit a payment I entered wrongly. By design. Raise a **Correction Request** and your manager will approve it.

I set a reminder but didn't get the notification. Check that notifications are allowed for the app in your phone's settings. Reminders are rescheduled automatically each time you open the app while online, so restarting the app or phone shouldn't lose them.

The app is draining my battery. Continuous GPS while on duty is demanding. Make sure you **punch out** at the end of every shift — there is currently no automatic punch-out, so an unclosed shift keeps tracking running overnight.

Where do I see my own performance? The **My Performance** tab on mobile, or the Dashboard page on web (which shows a personal scorecard if you don't have manager-level report access).

16. Appendices

Appendix A — Permission quick reference

The full matrix is in §3. The short version:

If you want to...	You need to be at least a...
Work a book of accounts	Telecaller or Field Agent
Allocate work, approve requests, see team reports	Branch Manager
Import files, review discrepancies, set targets, mark deposits, edit employees, manage master data	Operations Manager
Add another Operations Manager, access billing	Agency Admin

Appendix B — Disposition codes

Disposition codes are configured by your agency on the **Dispositions** page, so your exact list is yours. Each code declares which extra fields it needs, and the Log Call screen shows only those. Common categories include Promise to Pay, Refuse to Pay, Dispute, Settlement, and Legal Proceedings. Codes are retired rather than deleted, so historical trail entries never lose their meaning.

Appendix C — Where the numbers come from

For the exact definition and formula behind every metric on the dashboards — Collection, Resolution, Roll Back, Normalization, Recovery, and the deposited and trail-uploaded figures — see `docs/metrics-formulas.md`.

Appendix D — Related documents

Document	What it covers
<code>docs/TECHNICAL_DOCUMENTATION.md</code>	Architecture, data model, and the full record of design decisions
<code>docs/metrics-formulas.md</code>	Exact formula behind every dashboard number
<code>docs/TESTING_GUIDE.md</code>	Manual test scenarios by role
<code>docs/DEPLOYMENT.md</code>	How the system is deployed
<code>docs/deferred-work.md</code>	Known gaps and work explicitly scoped out
<code>SETUP_GUIDE.md</code>	Local development setup

Appendix E — Known limitations at the time of writing

Stated plainly, so nobody wastes time hunting for something that isn't there:

- **Password reset by SMS does not work.** No SMS provider is connected. An admin must set passwords directly.
- **The app is English only.** There is no Marathi or Hindi interface yet.

- **No automatic punch-out and no reminder to punch out.** Shifts stay open until you close them.
- **One phone number per customer.** No co-borrower or guarantor records.
- **Very large import files (roughly 20,000 rows or more) can time out.** Split them if you hit this.
- **Some dashboard chart types are not built yet** — the "Coming Soon" strip on the Management Dashboard is accurate about what's missing.

For the complete and current list, see [docs/deferred-work.md](#) .
